

# KumarBrothers Steel ERP Operator Manual

Last verified: 2026-06-16

This manual is for factory staff, supervisors, store teams, QA teams, dispatch teams, and office users who are new to ERP software. You do not need programming knowledge to use the system.

The system helps the factory keep one shared record of:

- ? Raw material stock.
- ? Goods received from vendors.
- ? Quality checks.
- ? Production progress through fabrication, painting, dispatch, and completion.
- ? Customer projects.
- ? Dispatches to customers.
- ? Scrap and reusable stock.
- ? Questions, instructions, and operator messages.

## Start Here

- ? Open the system address given by your manager.
- ? Enter your username and password.
- ? Select **Login**.
- ? After login, use the left-side menu to move between pages.

The screenshot shows the login interface for the KumarBrothers Steel Production Tracking System. It features a white login card centered on a light blue background. The card has the company name and system title at the top, followed by input fields for 'Email / Username' and 'Password'. A blue 'Login' button is positioned below the password field. At the bottom of the card, there is a link to 'Create an account' for users who do not have one. A copyright notice is visible at the very bottom of the card.

Enter password

Login

Don't have an account?  
Create an account

© 2026 KumarBrothers. Internal Use Only.

Login

Important:

- ? Use only your own login.
- ? Do not share passwords.
- ? If your password does not work, ask a Boss or Software Supervisor to reset it.
- ? If you are using a shared computer, log out before leaving the machine.

## Main Screen

After login, the dashboard is the main overview screen.

Dashboard

Use the dashboard to quickly answer:

- ? How much material is available?
- ? Which jobs are in fabrication, painting, dispatch, or completed?
- ? Is any stock low?
- ? Is scrap increasing?
- ? Are there recent updates or alerts?

If a number looks wrong, do not adjust it from the dashboard. Go to the correct page, such as Raw Materials, Stock Overview, Goods Receipt, Dispatch, or Scrap.

## Basic Navigation

Use the left menu for daily work:

- ? **Dashboard:** overview of factory status.
- ? **Raw Materials:** simple stock totals used by older tracking flows.
- ? **Materials Master:** controlled material catalog for formal stock, GRN, and dispatch.
- ? **Stock Overview:** physical stock lots and movement history.
- ? **Goods Receipt:** inward material from vendors.

- ? **Dispatch:** outward material sent to customers.
- ? **Tracking:** production stage movement.
- ? **Drawings:** drawing-based production tracking.
- ? **Customers:** customer and project records.
- ? **Scrap:** wasted or rejected material.
- ? **Reusable Stock:** good leftover material that can be used again.
- ? **Queries:** questions and clarifications.
- ? **Instructions:** supervisor instructions for the team.
- ? **Settings / Profile / Register:** account and system administration.

## Your Role

Your role decides which buttons you can see and use.

| Role                | What this role normally does                                |
|---------------------|-------------------------------------------------------------|
| Boss                | Full access and final approvals.                            |
| Software Supervisor | User setup and supervised system changes.                   |
| Store Keeper        | Stock, goods receipt, stock picking, and material movement. |
| QA Inspector        | Inspect, approve, reject, or hold received material.        |
| Dispatch Operator   | Prepare and confirm customer dispatches.                    |
| Fabricator          | Update fabrication progress.                                |
| Painter             | Update painting progress.                                   |
| User                | View information and perform limited daily tasks.           |

If a button is hidden or disabled, your role may not allow that action, or the record may not be ready for that step.

## Safety Rules

This system controls factory records. Treat these actions carefully:

- ? Do not reset stock unless a Boss or Supervisor has told you to do it.
- ? Do not approve a GRN until QA is complete for every line.
- ? Do not confirm dispatch until stock lots and weights are checked.
- ? Do not mark fabrication complete until the material deduction preview looks correct.
- ? Do not delete customer or stock records casually.
- ? If unsure, create a Query or ask your supervisor before approving.

Some high-risk actions ask you to type a confirmation phrase before the system continues. Read the message before typing.

## Daily Workflow

Most factory work follows this path:

- ? Create or confirm the customer/project.
- ? Add or upload production items.
- ? Receive material through Goods Receipt.

- ? Complete QA.
- ? Approve the GRN so stock lots are created.
- ? Move production through fabrication and painting.
- ? Prepare dispatch.
- ? Confirm dispatch.
- ? Record scrap and reusable stock as needed.
- ? Use Dashboard to monitor status.

## Raw Materials

Raw Materials is the simple stock page. It is useful for quick shop-floor stock totals and older production tracking flows.

| ISMR 200 B&B  | kg   | 12500.00    | 2860.00 | 9640.00   |        | <div>Edit</div> <div>Delete</div> |

Raw Materials

Use this page to:

- ? Add a material.
- ? Edit a material name, unit, or stock amount.
- ? See total, used, and available quantity.
- ? Manage mappings between Excel material names and system material names.
- ? Reset total stock or used quantity only when instructed.

How to add a material:

- ? Open **Raw Materials**.
- ? Select **Add Material**.
- ? Enter material name, unit, and total quantity.
- ? Save.
- ? Check that the new material appears in the table.

High-risk reset:

- ? **Reset Total Stock** changes the total stock value.

- ? **Reset Used Qty** changes the consumed quantity.
- ? The system asks for typed confirmation before sending the reset.
- ? If you do not understand the effect, cancel and ask a supervisor.

## Materials Master

Materials Master is the formal material catalog. It stores controlled material details such as code, type, grade, size, specification, reorder level, and HSN code.

The screenshot shows the 'Materials Master' interface for 'KumarBrothers Steel'. The left sidebar contains a navigation menu with sections: MAIN (Dashboard), OPERATIONS (Tracking, Drawings, Customers), INVENTORY (Raw Materials, **Materials Master**, Stock Overview, Goods Receipt), and OUTBOUND (Dispatch, Scrap, Reusable). The main content area is titled 'Materials Master' with the subtitle 'Manage material catalog for steel inventory'. It features a '+ Add Material' button and a search bar. Below the search bar, there are two material cards. The first card is for 'STL-ISMB-200-E250' (ISMB 200 Beam E250), marked as 'Active', with unit 'kg' and reorder level '3,000'. The second card is for 'STL-PLT-010-E250' (MS Plate 10mm E250), also marked as 'Active', with unit 'kg' and reorder level '2,000'. Each card has 'Edit' and 'Deactivate' buttons. The top right of the interface shows a notification bell and a 'Boss' button.

Materials Master

Use this page when material must be tracked properly for GRN, stock lots, dispatch, and reports.

Typical use:

- ? Open **Materials Master**.
- ? Add or edit the material code and name.
- ? Select the material type.
- ? Enter grade, specification, and dimensions if known.
- ? Save.

Good practice:

- ? Keep material codes consistent.
- ? Do not create duplicate material names for the same steel section.
- ? Use clear names that store and production teams recognize.

## Stock Overview

Stock Overview shows physical stock lots. A stock lot is a real batch of material with its own weight, QA status, vendor, location, and movement history.

Showing 1 lots

Stock Overview

Use this page to:

- ? Search stock lots.
- ? Check current weight.
- ? Check heat number, batch number, or coil number.
- ? Open lot details.
- ? Download visible stock rows as CSV.
- ? See movement history for a lot.

Important:

- ? Stock lots should normally change through GRN, production consumption, adjustment, transfer, or dispatch.
- ? Do not expect Hold or Release buttons to change stock status here. They are disabled until a dedicated lot-status workflow is added.
- ? Use GRN QA decisions for current quality status changes.

## Goods Receipt

Goods Receipt records material received from vendors. A Goods Receipt Note is usually called a GRN.

Goods Receipt

Use GRN when material enters the factory.

Typical GRN flow:

- ? Open **Goods Receipt**.
- ? Create or select the vendor.
- ? Create a draft GRN.
- ? Add material line items.
- ? Enter vehicle and weighbridge details if available.
- ? Submit for QA.
- ? QA Inspector records the result for every line.
- ? Select the storage yard, warehouse, or rack.
- ? Boss or Admin approves the GRN.
- ? The system creates stock lots.

Before approving a GRN, check:

- ? Vendor is correct.
- ? Material is correct.
- ? Weight is correct.
- ? QA status is complete for every line.
- ? Location is correct.

The system blocks approval until required steps are done. If a GRN is already approved and someone retries, the system will not create duplicate stock lots.

## Dispatch

Dispatch records stock sent out to a customer.

| <a href="#">DSP/FY26/00009</a> | 6/15/2026 | Metro Rail Depot Expansion | SO-MRD-2026-014 | JH09AF2201 | 3.825 MT    | Ready for approval | <div>View</div> |

Dispatch

Typical dispatch flow:

- ? Open **Dispatch**.
- ? Create a dispatch note for the customer.
- ? Add stock lots manually or use FIFO picking.
- ? Check vehicle, driver, transporter, and weight details.
- ? Submit the dispatch for approval.
- ? Confirm dispatch.
- ? The system reduces stock through stock movements.

Before confirming dispatch, check:

- ? Customer is correct.
- ? Stock lot numbers are correct.
- ? Weight is correct.
- ? Vehicle and driver details are correct.
- ? Dispatch note is submitted for approval.

The system locks picking after Draft stage. It also prevents repeated approval from deducting stock twice.

## Production Tracking

Production Tracking is the shop-floor board for work moving through the factory.

Production Tracking

The normal stages are:

- ? Fabrication.
- ? Painting.
- ? Dispatch.
- ? Completed.

Use this page to:

- ? Search for a job.
- ? Filter by customer or stage.
- ? Start work on a stage.
- ? Complete a stage.
- ? Review current production load.

Fabrication completion:

- ? When fabrication is completed, the system opens a material deduction preview.
- ? Read the preview carefully.
- ? Confirm only if the material and quantity look correct.
- ? The item does not move to the next stage until this confirmation is accepted.

If a job is not moving:

- ? Check whether the current stage was started.
- ? Check whether required checklist items are complete.
- ? Check your role permissions.
- ? Ask a supervisor if the item appears stuck.

## Drawings And Production

Drawings

Use this page when work must be controlled by drawing number instead of only a customer item.

Simple meaning of the drawing structure:

- ? **Drawing**: the engineering drawing or package.
- ? **Assembly**: a group inside the drawing.
- ? **Component**: a part such as beam, column, plate, bracket, or channel.
- ? **Component Instance**: the actual piece being made.
- ? **Stage Transition**: the movement of that piece through production stages.

Use consistent drawing numbers so everyone can find the same work.

Material Usage Summary

No material usage recorded yet.

Customer Detail

Use this page to:

- ? Review project information.
- ? Review linked production work.
- ? Check stage history.
- ? Confirm that uploaded work belongs to the right customer.

## Scrap

Scrap records material loss.

Scrap

Use Scrap when material is wasted because of cutting, damage, rejection, mistake, leftover unusable size, or other loss.

Record:

- ? Material.
- ? Weight.
- ? Quantity.
- ? Reason.
- ? Source customer or production item if known.
- ? Estimated value if available.

Good scrap recording helps the factory understand real loss and reduce waste.

## Reusable Stock

Reusable Stock tracks leftover material that is still usable.

## Common Problems

| Problem                       | What to do                                                                              |
|-------------------------------|-----------------------------------------------------------------------------------------|
| Login fails                   | Check username and password. Ask a supervisor to reset your password.                   |
| Button is disabled            | Finish the previous step, check required fields, or confirm your role has permission.   |
| Page does not update          | Refresh the page once. If still wrong, report it to a supervisor.                       |
| Wrong stock quantity          | Do not guess. Check Stock Overview, Goods Receipt, Dispatch, and Raw Materials history. |
| GRN cannot be approved        | Check QA status for every line and confirm a location is selected.                      |
| Dispatch cannot be confirmed  | Check that it is submitted, stock lots are picked, and weights are valid.               |
| Production item will not move | Check checklist, current stage, and role permission.                                    |

|                                |                                                                                                                              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Material deduction looks wrong | Cancel the action and ask a supervisor before confirming.                                                                    |
| Customer is missing            | Search by alternate spelling or project name. If missing, create a new customer only after confirming it is not a duplicate. |

## Shift Checklist

At the start of a shift:

- ? Log in.
- ? Read Instructions.
- ? Check Dashboard.
- ? Review your assigned page: Store, QA, Tracking, Dispatch, or Production.
- ? Check open Queries.

During the shift:

- ? Update work as it happens.
- ? Use the correct page for each action.
- ? Confirm high-risk actions carefully.
- ? Raise a Query when a decision is unclear.

At the end of a shift:

- ? Finish pending updates.
- ? Check Dashboard for obvious mistakes.
- ? Log out.
- ? Tell the next shift about open issues.

## Glossary

| Word           | Meaning                                                              |
|----------------|----------------------------------------------------------------------|
| ERP            | The shared factory software system.                                  |
| GRN            | Goods Receipt Note, used when material comes into the factory.       |
| Stock Lot      | A physical batch of material with its own weight and traceability.   |
| QA             | Quality Assurance, the team or process that checks material quality. |
| FIFO           | First In, First Out. Older stock is picked before newer stock.       |
| Dispatch       | Material or finished work sent to a customer.                        |
| Scrap          | Material loss or unusable leftover.                                  |
| Reusable Stock | Leftover material that can still be used later.                      |
| Query          | A question or clarification raised in the system.                    |

|       |                                                                          |
|-------|--------------------------------------------------------------------------|
| Stage | A production step such as fabrication, painting, dispatch, or completed. |
|-------|--------------------------------------------------------------------------|

## When To Ask For Help

Ask a Boss, Software Supervisor, or system owner for help when:

- ? You cannot log in.
- ? Your role does not show a button you need.
- ? Stock quantity looks wrong.
- ? A GRN, dispatch, or production item appears stuck.
- ? A material deduction preview does not match the physical work.
- ? You are unsure whether to approve, reset, delete, or confirm something.

Do not force a workaround outside the system. Raise a Query or inform your supervisor so the decision is recorded.
